A tertiary amine is an amine that has the following general structural formula.

\[
\begin{array}{c}
\text{R}^1 \text{N} \text{R}^2 \\
\text{R}^3
\end{array}
\]

\( \text{R}^1 - \text{R}^3 = \text{alkyl and/or aryl} \)

eg:

The nitrogen atom in a tertiary amine is called the tertiary amine group.

See also primary amine and secondary amine.
