# Table of Contents

## 01 Covalent Bonding and Shapes of Molecules 1

1.1 How Do We Describe the Electronic Structure of Atoms? 2

1.2 What Is the Lewis Model of Bonding? 5

1.3 How Do We Predict Bond Angles and the Shapes of Molecules? 14

1.4 How Do We Predict If a Molecule Is Polar or Nonpolar? 18

1.5 What Is Resonance? 19

1.6 What Is the Orbital Overlap Model of Covalent Bonding? 22

1.7 What Are Functional Groups? 28

### CHEMICAL CONNECTIONS

1A Buckyball: A New Form of Carbon 17

## 02 Acids and Bases 41

2.1 What Are Arrhenius Acids and Bases? 42

2.2 What Are Brønsted–Lowry Acids and Bases? 43

2.3 How Do We Measure the Strength of an Acid or Base? 46

2.4 How Do We Determine the Position of Equilibrium in an Acid–Base Reaction? 48

2.5 What Are the Relationships between Acidity and Molecular Structure? 50

2.6 What Are Lewis Acids and Bases? 54

Summary of Key Questions 57

Quick Quiz 58
03 Alkanes and Cycloalkanes 63

3.1 What Are Alkanes? 64

3.2 What Is Constitutional Isomerism in Alkanes? 66

3.3 How Do We Name Alkanes? 69

3.4 What Are Cycloalkanes? 73

3.5 What Is the IUPAC System of Nomenclature? 75

3.6 What Are the Conformations of Alkanes and Cycloalkanes? 76

3.7 What Is Cis–Trans Isomerism in Cycloalkanes? 83

3.8 What Are the Physical Properties of Alkanes and Cycloalkanes? 87

3.9 What Are the Characteristic Reactions of Alkanes? 91

3.10 What Are the Sources of Alkanes? 91

CHEMICAL CONNECTIONS

3A The Poisonous Puffer Fish 84

3B Octane Rating: What Those Numbers at the Pump Mean 94
04 Alkenes and Alkynes 108

4.1 What Are the Structures and Shapes of Alkenes and Alkynes? 110

4.2 How Do We Name Alkenes and Alkynes? 112

4.3 What Are the Physical Properties of Alkenes and Alkynes? 120

4.4 Why Are 1-Alkynes (Terminal Alkynes) Weak Acids? 122

Summary of Key Questions 123

Quick Quiz 124

Problems 124

Looking Ahead 128

Group Learning Activities 128

CHEMICAL CONNECTIONS

4A Ethylene, a Plant Growth Regulator 109

4B Cis–Trans Isomerism in Vision 111

4C Why Plants Emit Isoprene 121

05 Reactions of Alkenes and Alkynes 129

5.1 What Are the Characteristic Reactions of Alkenes? 130

5.2 What Is a Reaction Mechanism? 130

5.3 What Are the Mechanisms of Electrophilic Additions to Alkenes? 136

5.4 What Are Carbocation Rearrangements? 147

5.5 What Is Hydroboration–Oxidation of an Alkene? 150

5.6 How Can an Alkene Be Reduced to an Alkane? 153

5.7 How Can an Acetylide Anion Be Used to Create a New Carbon–Carbon Bond? 155

5.8 How Can Alkynes Be Reduced to Alkenes and Alkanes? 157

Summary of Key Questions 158

CHEMICAL CONNECTIONS

5A Catalytic Cracking and the Importance of Alkenes 133

06 Chirality: The Handedness of Molecules 167

6.1 What Are Stereoisomers? 168

6.2 What Are Enantiomers? 169

6.3 How Do We Designate the Configuration of a Stereocenter? 173

6.4 What Is the 2^nRule? 176

6.5 How Do We Describe the Chirality of Cyclic Molecules with Two Stereocenters? 180

6.6 How Do We Describe the Chirality of Molecules with Three or More Stereocenters? 182

6.7 What Are the Properties of Stereoisomers? 183

6.8 How Is Chirality Detected in the Laboratory? 184

6.9 What Is the Significance of Chirality in the Biological World? 185

6.10 How Can Enantiomers Be Resolved? 186
