The Student Ability Rating and Inquiry System (SARIS) is a separate application from the LibreTexts libraries that addresses the need for homework with an extensive question database. When fully implemented, SARIS will generate valuable statistics tracking individual student performance. The SARIS shares similar to other homework applications, but is augmented by links between the SARIS and the LibreTexts libraries, which direct students toward relevant module content. Performance-related feedback is necessary for students to learn effectively, which requires that opportunities exist for students to perform. Often in the pursuit of class goals, students hit “brick walls” that prohibit their advancing.
