3. 6.2: Counting Nails by the Pound
4. 6.3: Counting Atoms by the Gram
5. 6.4: Counting Molecules by the Gram
6. 6.5: Chemical Formulas as Conversion Factors
7. 6.6: Mass Percent Composition of Compounds
8. 6.7: Mass Percent Composition from a Chemical Formula
9. 6.8: Calculating Empirical Formulas for Compounds
10. 6.9: Calculating Molecular Formulas for Compounds
    • Chapter 7
1. Chapter 7: Chemical Reactions
2. 7.1: Grade School Volcanoes, Automobiles, and Laundry Detergents
3. 7.2: Evidence of a Chemical Reaction
4. 7.3: The Chemical Equation
5. 7.4: How to Write Balanced Chemical Equations
6. 7.5: Aqueous Solutions and Solubility: Compounds Dissolved in Water
7. 7.6: Precipitation Reactions: Reactions in Aqueous Solution That Form a Solid
8. 7.7: Writing Chemical Equations for Reactions in Solution: Molecular, Complete Ionic, and Net Ionic Equations
9. 7.8: Acid–Base and Gas Evolution Reactions
10. 7.9: Oxidation–Reduction Reactions
11. 7.10: Classifying Chemical Reactions
12. 7.11: The Activity Series

Chapter 8
1. Chapter 8: Quantities in Chemical Reactions
2. 8.1: Climate Change: Too Much Carbon Dioxide
3. 8.2: Stoichiometry
4. 8.3: Making Molecules: Mole-to-Mole Conversions
5. 8.4: Making Molecules: Mass-to-Mass Conversions
6. 8.5: Limiting Reactant, Theoretical Yield, and Percent Yield
7. 8.6: Limiting Reactant, Theoretical Yield, and Percent Yield from Initial Masses of Reactants
8. 8.7: Enthalpy: A Measure of the Heat Evolved or Absorbed in a Reaction

Chapter 9
1. Chapter 9: Electrons in Atoms and the Periodic Table
2. 9.1: Blimps, Balloons, and Models of the Atom
3. 9.2: Light: Electromagnetic Radiation
4. 9.3: The Electromagnetic Spectrum
5. 9.4: The Bohr Model: Atoms with Orbits
6. 9.5: The Quantum-Mechanical Model: Atoms with Orbitals
7. 9.6: Quantum-Mechanical Orbitals and Electron Configurations
8. 9.7: Electron Configurations and the Periodic Table
9. 9.8: The Explanatory Power of the Quantum-Mechanical Model
10. 9.9: Periodic Trends: Atomic Size, Ionization Energy, and Metallic Character

Chapter 10
1. Chapter 10: Chemical Bonding
2. 10.1: Bonding Models and AIDS Drugs
3. 10.2: Representing Valence Electrons with Dots
4. 10.3: Lewis Structures of Ionic Compounds: Electrons Transferred
5. 10.4: Covalent Lewis Structures: Electrons Shared
6. 10.5: Writing Lewis Structures for Covalent Compounds
7. 10.6: Resonance: Equivalent Lewis Structures for the Same Molecule
8. 10.7: Predicting the Shapes of Molecules
9. 10.8: Electronegativity and Polarity: Why Oil and Water Don’t Mix
• Chapter 11
1. Chapter 11: Gases
   2. 11.1: Extra-Long Straws
3. 11.2: Kinetic Molecular Theory: A Model for Gases
4. 11.3: Pressure: The Result of Constant Molecular Collisions
   5. 11.4: Boyle’s Law: Pressure and Volume
6. 11.5: Charles’s Law: Volume and Temperature
   7. 11.6: Gay-Lussac’s Law: Temperature and Pressure
8. 11.7: The Combined Gas Law: Pressure, Volume, and Temperature
   9. 11.8: Avogadro’s Law: Volume and Moles
10. 11.9: The Ideal Gas Law: Pressure, Volume, Temperature, and Moles
11. 11.10: Mixtures of Gases: Why Deep-Sea Divers Breathe a Mixture of Helium and Oxygen

• Chapter 12
1. Chapter 12: Liquids, Solids, and Intermolecular Forces
   2. 12.1: Interactions between Molecules
   3. 12.2: Properties of Liquids and Solids
4. 12.3: Intermolecular Forces in Action: Surface Tension and Viscosity
   5. 12.4: Evaporation and Condensation
   6. 12.5: Melting, Freezing, and Sublimation
7. 12.6: Types of Intermolecular Forces: Dispersion, Dipole–Dipole, Hydrogen Bonding, and Ion-Dipole
8. 12.7: Types of Crystalline Solids: Molecular, Ionic, and Atomic
9. 12.8: Water: A Remarkable Molecule

10. 13.9: Freezing Point Depression and Boiling Point Elevation: Making Water Freeze Colder and Boil Hotter
11. 13.10: Osmosis: Why Drinking Salt Water Causes Dehydration

• Chapter 14
1. Chapter 14: Acids and Bases
   2. 14.1: Sour Patch Kids and International Spy Movies
Skills to Develop

- Define quantum mechanics
- Differentiate between an orbit and an orbital.

How do you study something that seemingly makes no sense? We talk about electrons being in orbits and it sounds like we can tell where that electron is at any moment. We can draw pictures of electrons in orbit, but the reality is that we just don't know exactly where they are. We are going to take a quick look at an area of science that even leaves scientists puzzled. When asked about quantum mechanics, Niels Bohr (who proposed the Bohr model of the atom) said: "Anyone who is not shocked by quantum theory has not understood it". Richard Feynman (one of the founders of modern quantum theory) stated: "I think I can safely say that nobody understands quantum theory". So, let's take a short trip into a land that challenges our everyday world.

**Quantum Mechanics**

The study of motion of large objects such as baseballs is called mechanics, or more specifically classical mechanics. Because the quantum nature of the electron and other tiny particles moving at high speeds, classical mechanics is inadequate to accurately describe their motion. **Quantum mechanics** is the study of the motion of objects that are atomic or subatomic in size and thus demonstrate wave-particle duality. In classical mechanics, the size and mass of the objects involved effectively obscures any quantum effects so that such objects appear to gain or lose energies in any amounts. Particles whose motion is described by quantum mechanics gain or lose energy in the small pieces called **quanta**.

One of the fundamental (and hardest to understand) principles of quantum mechanics is that the electron is both a particles and a wave. In the everyday macroscopic world of things we can see, something cannot be both. But this duality can exist in the quantum world of the submicroscopic at the atomic scale.

At the heart of quantum mechanics is the idea that we cannot specify accurately the location of an electron. All we can say is that there is a probability that it exists within this certain volume of space. The scientist Erwin Schrödinger developed an equation that deals with these calculations, which we will not pursue at this time.
Recall that in the Bohr model, the exact path of the electron was restricted to very well-defined circular orbits around the nucleus. An orbital is the quantum mechanical refinement of Bohr’s orbit. In contrast to his concept of a simple circular orbit with a fixed radius, orbitals are mathematically derived regions of space with different probabilities of having an electron.

Summary

Quantum mechanics involves the study of material at the atomic level. This field deals with probabilities since we cannot definitely locate a particle. Orbitals are mathematically derived regions of space with different probabilities of having an electron.
